

Panic Mode

Manish Dua
200413335

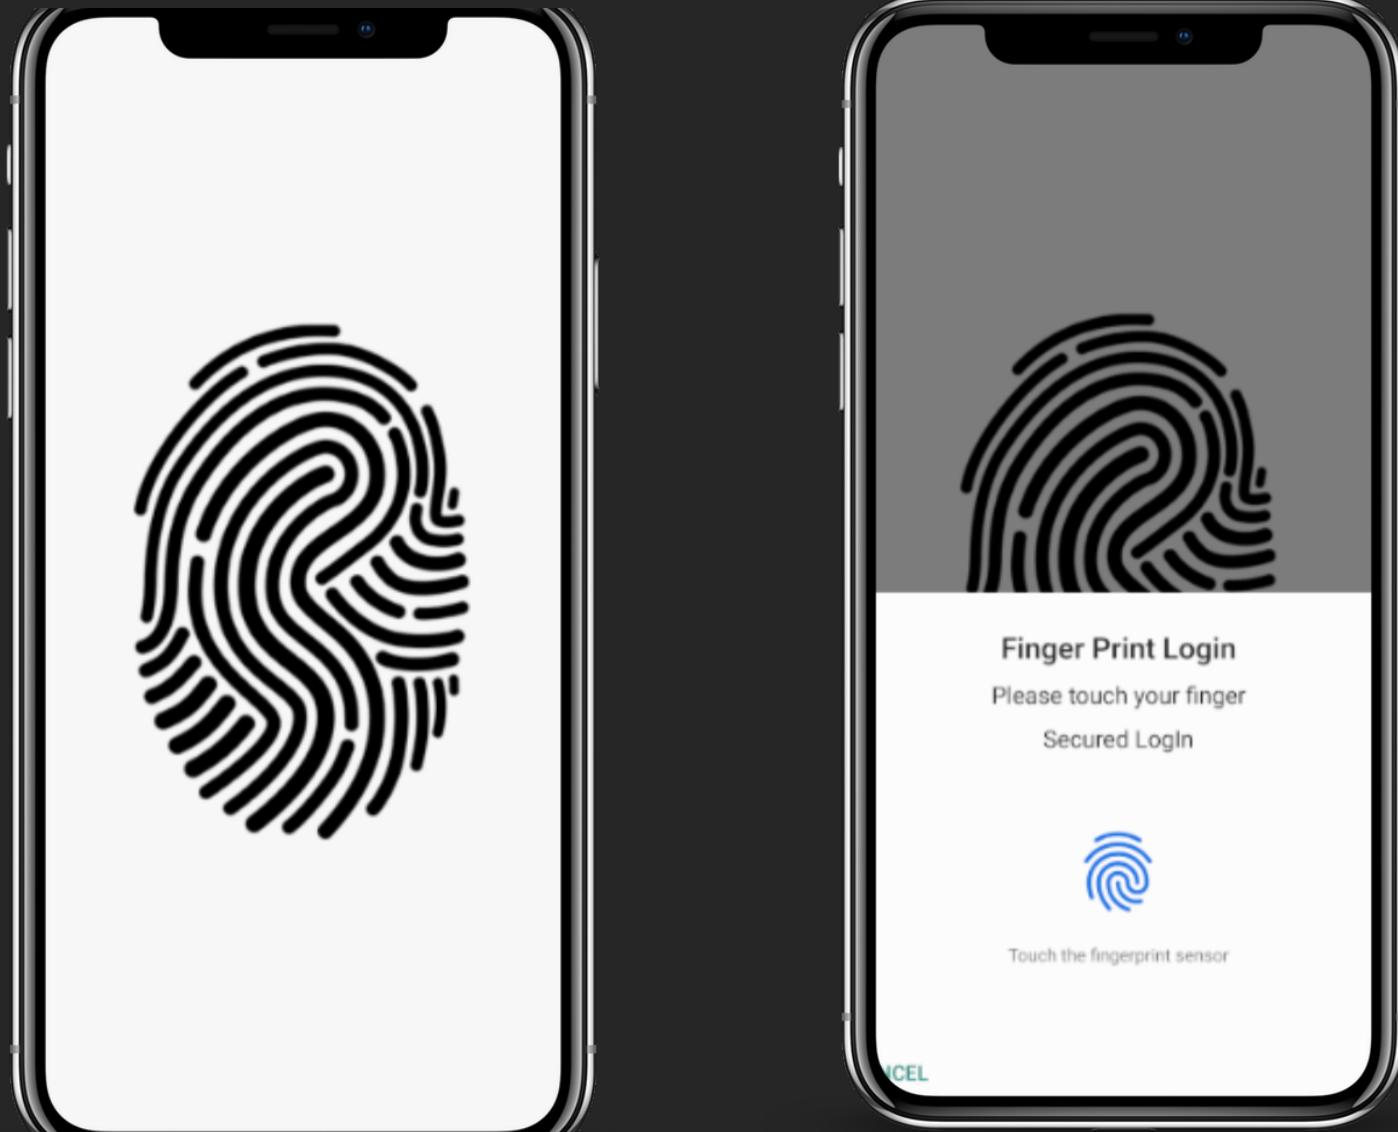

Application Designed for
emergency and panic situations

This is the Splash screen and logo of the
application

Login Screen

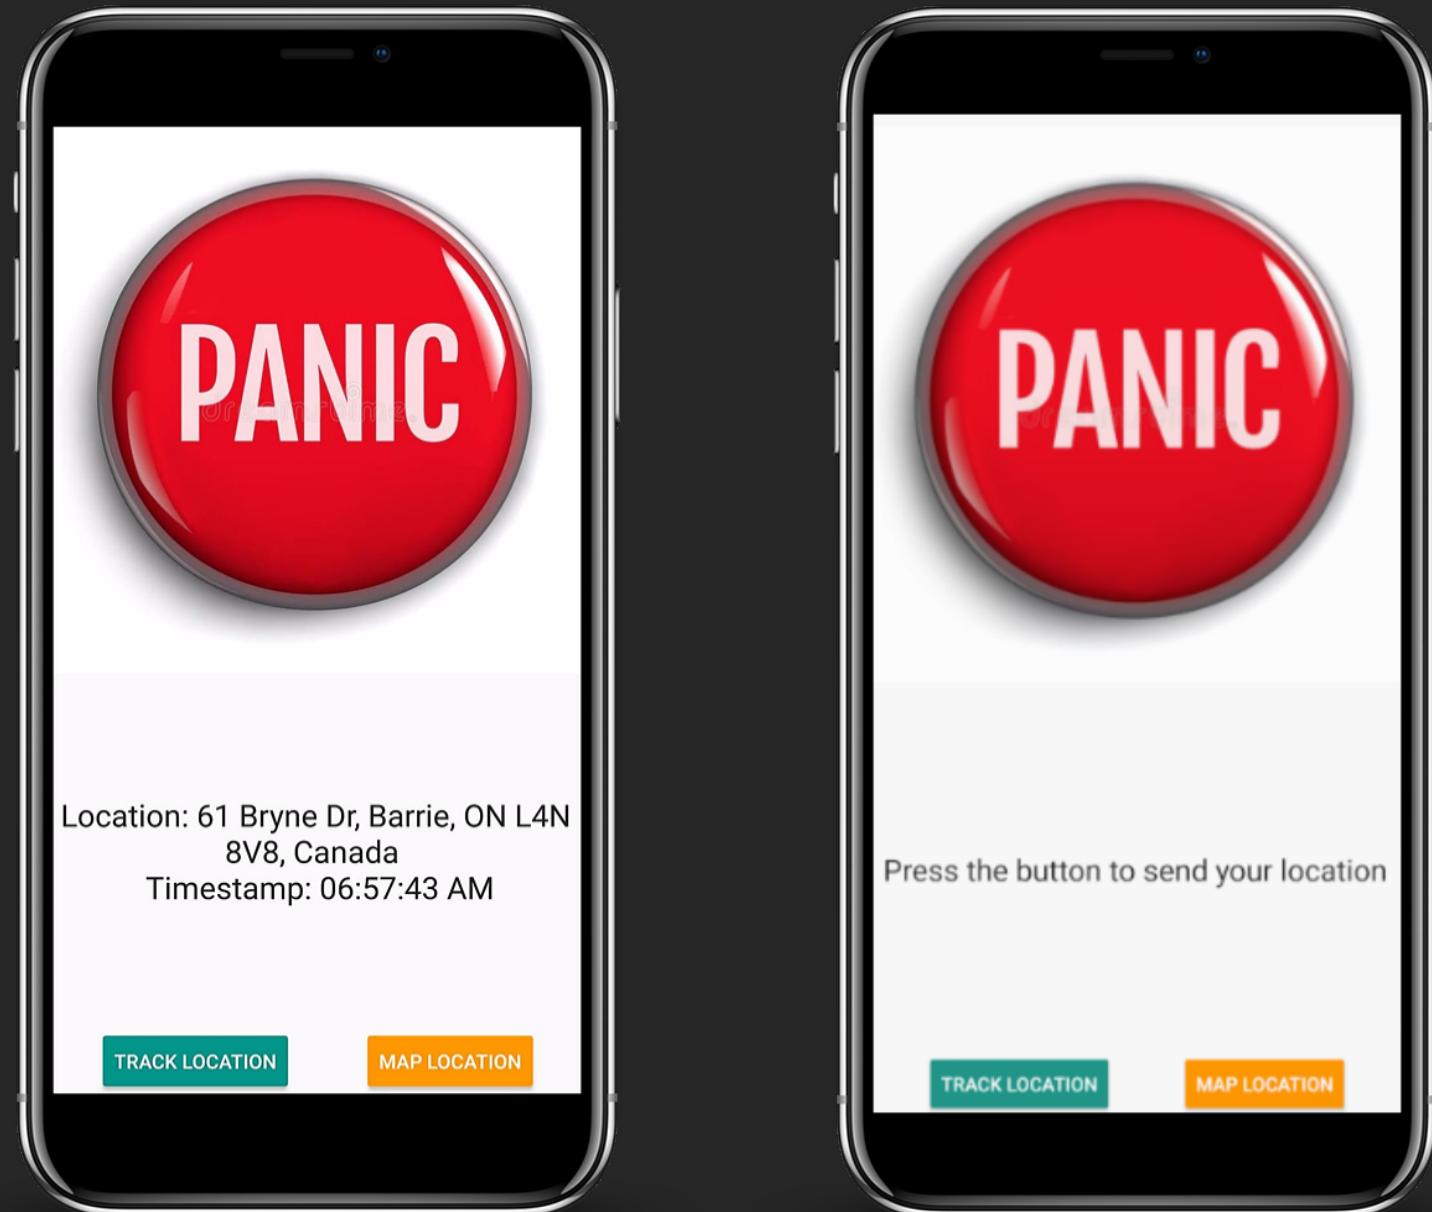

Implemented finger
print login to the
application

Home Screen landing page after login

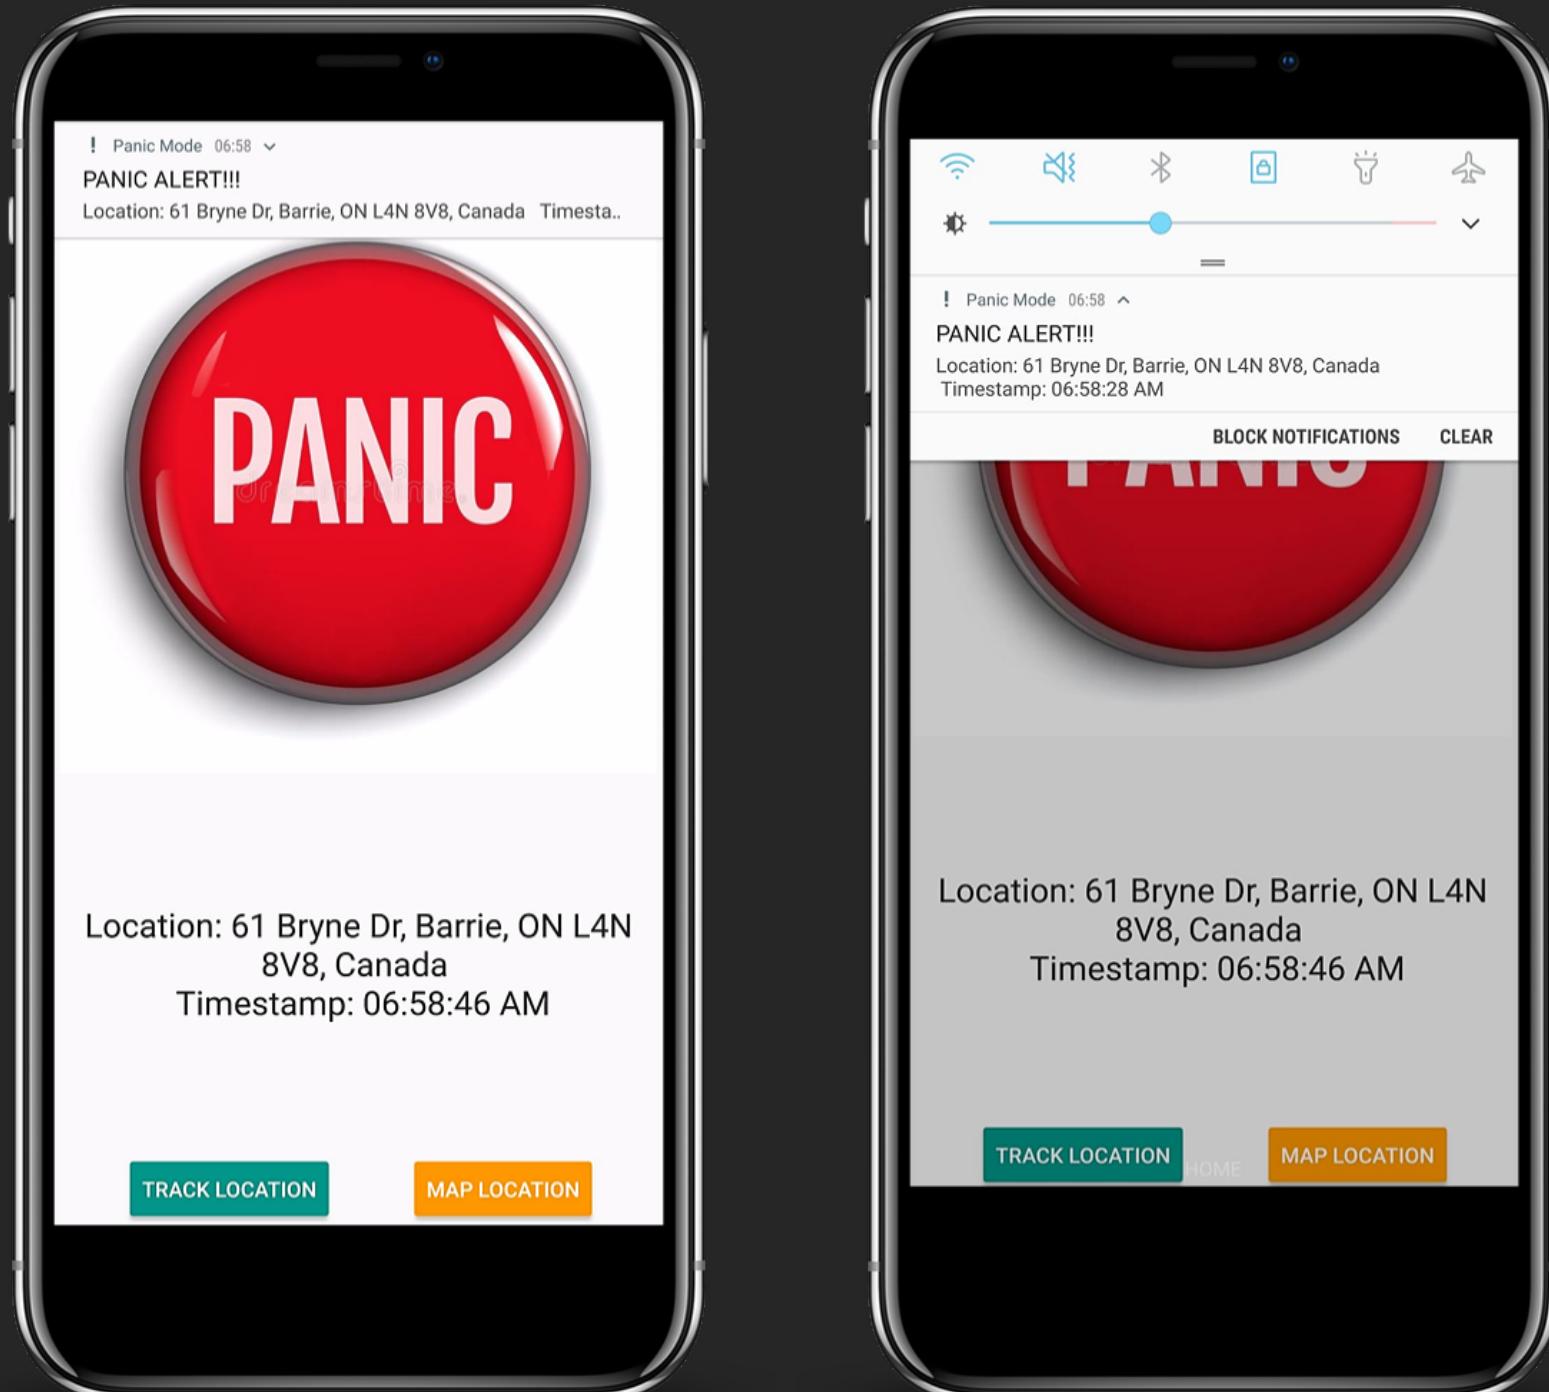

After secured login through finger print. We have this home screen with PANIC button and two other buttons where user can Track location and See the location.

As soon as user press Track location it will show the user its current location.

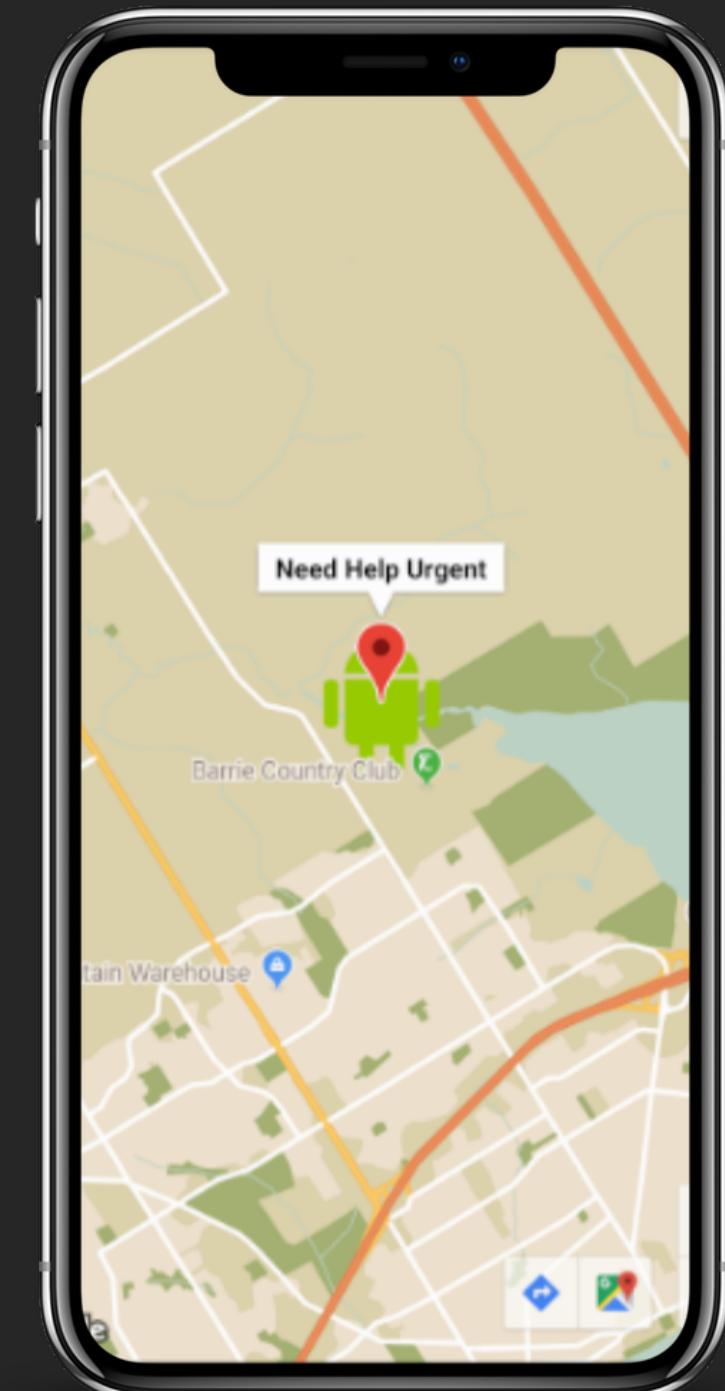

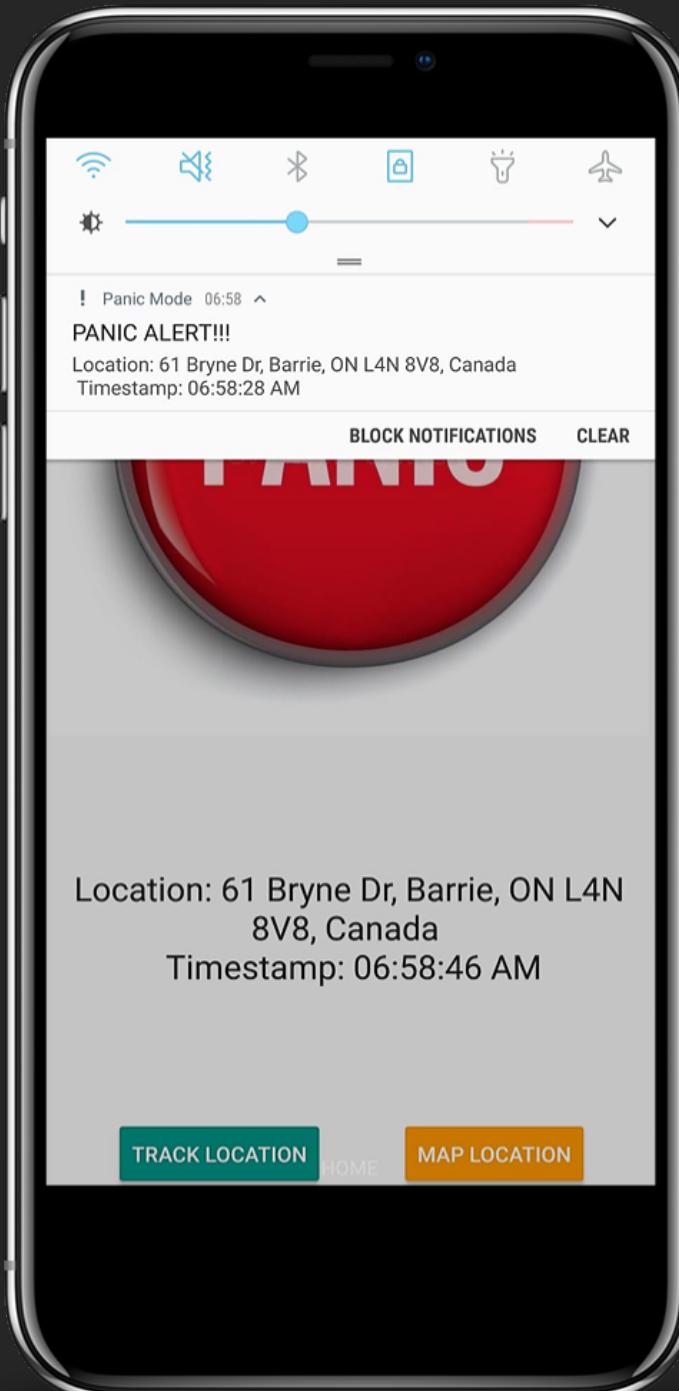

PANIC BUTTON

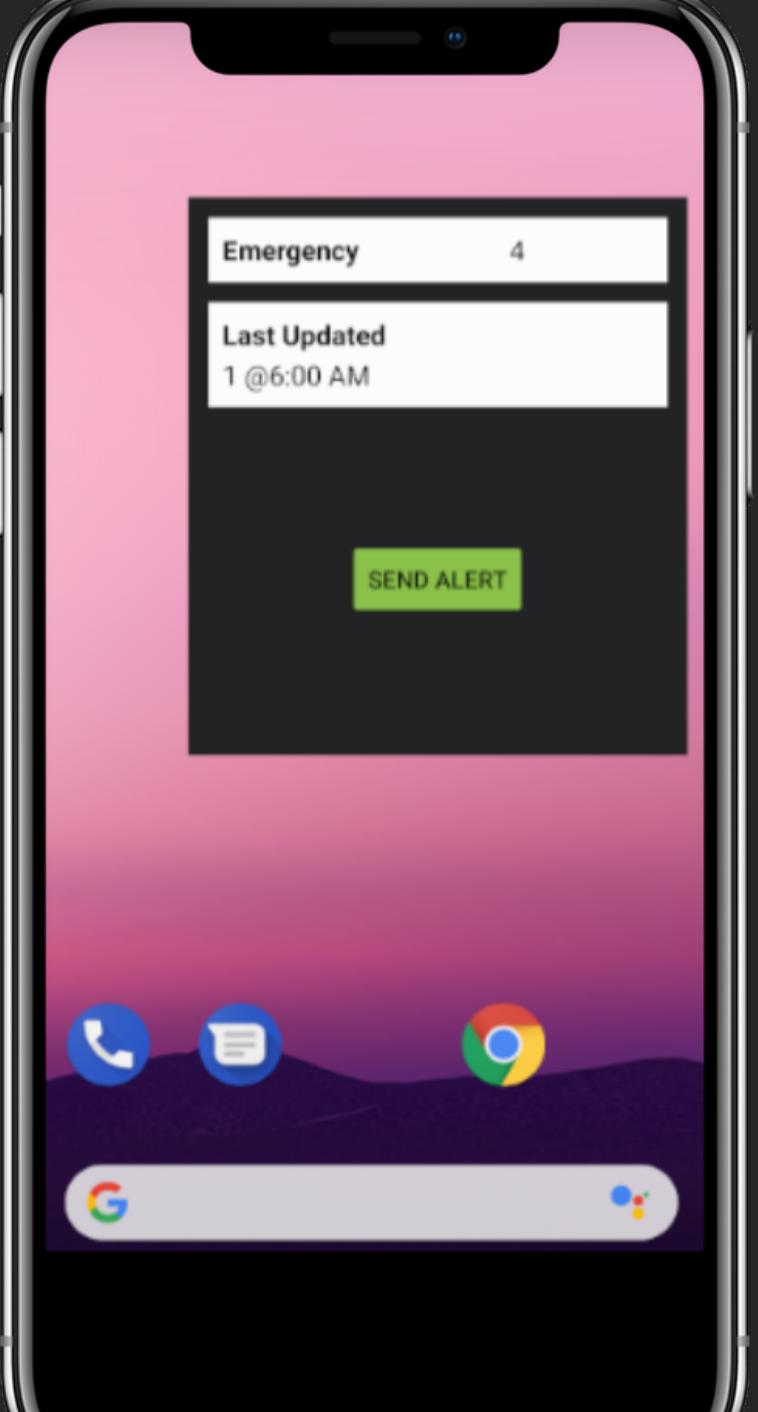

AS soon as user click on the BIG PANIC Button it will send the notification for help to all the people having this application in there phone and it will send the current location of the person who pressed the panic button needs help!!

On Tapping Notification

People who will see the notification will have direct access to the location of the person who needs help and can see his live current location on map as soon as they tap on the notification from the Bar

Easy WIDGET Access

Person in panic situation can also send notification from his home screen by just clicking or pressing the SEND ALERT BUTTON.

This will notify the people using the application that the person needs help and his location also.
